

The ACE Contractors Group of Companies are committed to the management of risk to protect and enhance value for its stakeholders.

Risk management is a key part of improving ACE's business and services to be a leader in the civil construction industry. Our aim is to achieve best practice in controlling the risks to which our business is exposed.

To achieve this aim, risk management standards will be created, maintained and continually improved. This will involve risk identification and risk evaluation linked to practical and cost-effective risk control measures commensurate with our business.

Risk management is a continuous process demanding awareness and proactive action from all ACE employees and external stakeholders to reduce the possibility and impact of those risks, whether caused by ACE or external stakeholders.

All managers within ACE are responsible for providing leadership and direction for risk management. Suitable risk management activities will be incorporated into our business planning, operations and the management of our contractors and suppliers.
